CAUTION FOR REPAIR

DISASSEMBLY FOR REPAIR

Caution : R-SA7's circuit design use chassis ground.
Not supply DC power to circuit if disassembly and non-connection of each parts on R-SA7.

Connect the alligator clip with wire between main chassis and the ground of system control. (1)

CIRCUIT DESCRIPTION

1. INITIAL STATE

(1) AMP-related block

• POWER	OFF
• SELECTOR SOURCE	TUNER
• DISPLAY	SELECTOR
• N.B. CIRCUIT	OFF
• A CLASS VOLUME VALUE	1.40 STEP
• AB CLASS VOLUME VALUE	7 STEP
• PURE MODE	NORMAL (AB CLASS)
• AUTO POWER SAVE	OFF

(2) TUNER-related block

• BAND	FM
• FREQUENCY	Lower-limit value of receiving frequency.
FM	87.5 MHz
AM	531 kHz
• AUTO/MANUAL	AUTO
• P.CH MEMORY	Last frequency
• Last P.CH	01ch
• RDS DATA TABLE MEMORY	NO DATA

(3) TIMER-related block

• CLOCK	STOP (AM12:00)
• PROGRAM	WORKING MODE OFF
CONTENTS OF PROGR.	ON=AM 12:00
	OFF=AM 12:00
	PLAY MODE=PLAY
	SELECTOR=TUNER(1ch)
	REC MODE OFF
• OTT	WORKING MODE OFF
OTT ON TIME	AM 7:00

(4) TEST PRESET FREQUENCY

Channel	BAND	E TYPE	Channel	BAND	E TYPE
01ch	FM	87.50MHz	11ch	FM	90.00MHz
02ch	FM	97.50MHz	12ch	FM	98.00MHz
03ch	FM	108.00MHz	13ch	FM	98.50MHz
04ch	AM	630kHz	14ch	FM	106.00MHz
05ch	AM	999kHz	15ch	AM	531kHz
06ch	AM	1440kHz	16ch	AM	990kHz
07ch	FM	87.50MHz	17ch	AM	1602kHz
08ch	FM	87.50MHz	18ch	FM	87.50MHz
09ch	FM	87.50MHz	19ch	FM	87.50MHz
10ch	FM	89.10MHz	20ch	FM	87.50MHz

※ The initial setting is performed in a following event :

1. When backup memory data is destroyed when reset is applied to the microprocessor.
2. When the power cord is plugged in to the AC wall outlet while pressing the POWER key.

2. BACKUP

This function holds the current state of the unit even if the AC power of the receiver is turned OFF.

(1) Operation outline

The backup state set command signal (CE) of a microcomputer is set low when the AC power is turned OFF. The microcomputer detects the signal and enters the stop state. The microcomputer is reset when the AC power is turned ON. The data for backup state confirmation is checked by reset processing.

The microcomputer is initialized when the data was destroyed. If it is not destroyed, the microcomputer is started in the backup state.

- The data for backup state confirmation is written in a RAM area.
- The microcomputer is set to the STOP mode so as to save the power consumption.
- A backup state set command signal is detected by a timer interrupt of 1 msec.
- The backup guarantee period is set in a circuit.

(2) Backup state setting

- The data (5A69H) for backup state confirmation is written in a RAM area.

(3) Contents of backup data to be held

— — — AMP — — —

CIRCUIT DESCRIPTION

3. DESTINATION LIST OF TUNER

Table 3-1 Destination List of Tuner

Destination	BAND	Receive frequency range	channel space	IF	PLL reference frequency	DIODE SW0 (D518)
E3 (RDS)	FM	87.5MHz ~108.0MHz	50kHz	+10.7MHz	25kHz	1
	AM	531kHz ~1602kHz	9kHz	+450kHz	9kHz	

DIODE SW(DSWX) : 1 = With DIODE
(When static, input HIGH)

※ ATTENTION

The RDS PTY AF search always corresponds to a span search of 100kHz. Therefore, a span search of 50 kHz cannot be performed.

4. TEST MODE

4-1. Initializing

The system is initialized when the power is turned on while pressing the POWER key.

(1) Contents of operation

- All the functions are initialized.

4-2. AMP test mode using main unit's keys

4-2-1. Entering the AMP test mode

- Turn on the power while pressing the TUNING DOWN key.

4-2-2. Canceling the AMP test mode

- By turning off the power, the system is initialized and the test mode is canceled.

4-2-3. Contents of AMP test mode

(1) Automatic POWER ON

- The POWER ON state is entered whenever the power is turned on while pressing the TUNING DOWN key. All functions are then initialized and activated in the all-lighting mode.
- Sub-clock oscillation diagnosis function
The oscillation diagnosis (existence of oscillation and measurement of period) of a sub-clock is performed before the test mode is entered. If the diagnosis result is OK, the system enters the test mode.
If the diagnosis result is NG, the oscillation of the sub-clock is diagnosed again. If the result is OK, the system enters the test mode. If the diagnosis result is continuously NG five times, the system stops with ERR 1 and ERR 2 displayed.

(2) All-lighting mode

- All the fluorescent display indicators and LED lamps light when the power is turned on while pressing the TUNING DOWN key.

- After that, the all-lighting mode is canceled when any main unit's key is pressed. The normal display obtained when the selector is set to TUNER then appears.

(3) Others

- The AMP test mode is not terminated even if the selector is set to positions other than TUNER.
- In the AMP test mode, the muting during mode selection is not controlled. However, the operation during the power-on sequence is the same as the normal operation.
- The SP protection operation is also the same as the normal operation.
- In the AMP test mode using main unit's keys, the keys below provide a special operation according to the position where the selector is set. The main unit's keys except described below and the rotary encoder provide the normal operation.

(4) When selector is set to TUNER

Key	Operation
CLASS A key	Increments the P.CALL every time this key is pressed.
N.B. key	Decrement the P.CALL every time this key is pressed.
ENTER key	Selects the display cyclically in the order below every time this key is pressed.

- Write data in the unused area of EEPROM, then read the written data. If the read data is the same as the written data, "RAM OK" is displayed in the fluorescent display indicator. If the former is different from the latter, "RAM NG" is displayed.
- Set the TUNER ATT to OFF and display the S level in hexadecimal when the ENTER key is pressed. ("ATT OFF ***" is displayed in the fluorescent display indicator.)
- Set the TUNER ATT to ON and display the S level in hexadecimal when the ENTER key is pressed. ("ATT ON ***" is displayed in the fluorescent display indicator.)

* The special display using the ENTER key is continued until the next operation is carried out. (**: S LEVEL)

When keys other than ENTER are pressed in items ① to ③ above, the TUNER ATT is set to OFF and the normal display appears. The operation corresponding to the key that has been pressed is performed in this case.

(5) When selector is set to positions other than TUNER

[ENTER key] Sets the master volume to the middle value (NORMAL 18 and LOW POWER 3.60) every time this key is pressed.

* The normal operation is performed when the ENTER key is continuously pressed for two seconds (nothing is done).

[TUNING UP key] Sets the master volume to the maximum value (NORMAL 70 and LOW POWER 12.00) every time this key is pressed.

[TUNING DOWN key] Sets the master volume to the minimum value (NORMAL 1 and LOW POWER 0.20) every time this key is pressed.

CIRCUIT DESCRIPTION

[AUTO key] Selects the MUTE operation and equalizer cyclically in the order below for operation display every time this key is pressed.

--> MUTE operation -> Minimum -> Maximum -> Flat --

* In the operation for except the AUTO key, the equalizer is made flat.

[BAND key] Every time this key is pressed, all the displays go off and the normal display is selected cyclically.

4-3. RDS test mode using main unit's keys

4-3-1. Entering the RDS test mode

- Turn on the power while pressing the TUNING UP key.

4-3-2. Canceling the RDS test mode

- By turning off the power, the system is initialized and the test mode is canceled.

4-3-3. Contents of RDS test mode

- The POWER ON state is entered whenever the power is turned on while pressing the TUNING UP key. All the functions are then initialized.
- In the RDS test mode using main unit's keys, the keys below provides a special operation according to the position where the selector is set. The main unit's keys except described below and the rotary encoder provide the normal operation.

Key	Operation
CLASS A key	Performs the same operation as for remote control key "DISPLAY" every time this key is pressed.
INPUT SEL. key	Performs the same operation as for remote control key "PTY" every time this key is pressed.
N.B. key	Performs the same operation as for remote control key "TA" every time this key is pressed.
ENTER key	Selects the display cyclically in the order below every time this key is pressed.

① Write data in the unused area of EEPROM, then read the written data. If the read data is the same as the written data, "RAM OK" is displayed in the fluorescent display indicator. If the former is different from the latter, "RAM NG" is displayed.

② Set the TUNER ATT to OFF and display the S level in hexadecimal when the ENTER key is pressed. ("ATT OFF ***" is displayed in the fluorescent display indicator.)

③ Set the TUNER ATT to ON and display the S level in hexadecimal when the ENTER key is pressed. ("ATT ON ***" is displayed in the fluorescent display indicator.)

* The special display using the ENTER key is continued until the next operation is carried out. (**: S LEVEL)

When keys other than ENTER are pressed in items ① to ③ above, the TUNER ATT is set to OFF and the normal display appears. The operation corresponding to the key that has

4-4. SERIAL TEST MODE

(1) Setting the serial test mode

The unit is put into the serial test mode when a serial code "TEST ON" is input during the POWER-ON sequence.

In the 16-bit serial test mode, serial code C27FH is input.

- In the serial test mode, all remote control keys and ordinary serial codes are disabled. Only the panel keys perform the same operation as usually.

(2) Canceling the serial test mode

- The serial test mode is canceled to return to the ordinary mode by inputting a "TEST OFF" code (C27 EH). After the ordinary mode was returned, the serial mode is returned to the state before the test mode is entered. The backup operation is not initialized.
- The serial test mode is also canceled when the AC power is turned OFF.

(3) Cautions

- The serial test code is prescribed as a 16-bit code only.
- The operations below are inhibited in the serial test mode. The operations mentioned above cannot be guaranteed when they are performed in the serial test mode.
- An identical code is output when the serial test mode code is input.

7. CIRCUIT DESCRIPTION.

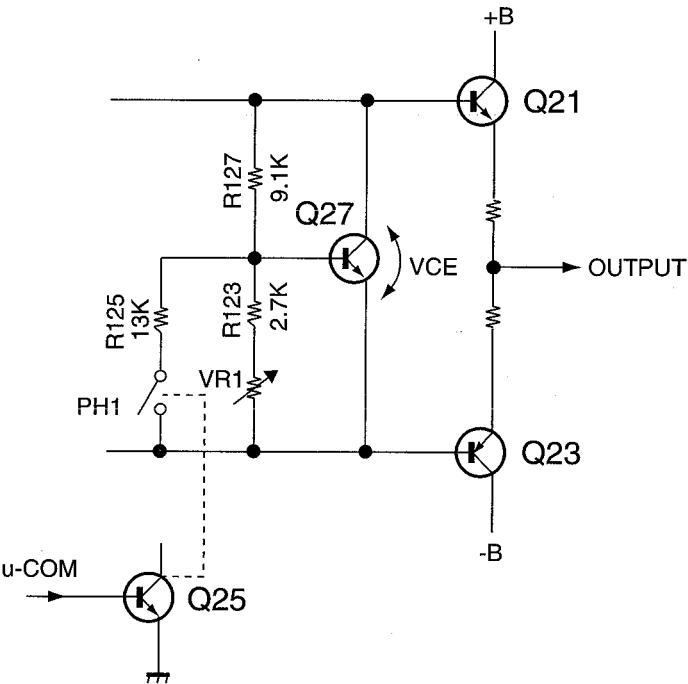

R-SA7 uses switching circuit class-A and class-B in final stage of power amplifier.

CLASS-B

As Q25 has low signal from microprocessor and Q25 and PH1, both are turn-off.
Q27' s bias is decided by R123, 127, and VR1. Bias current of Q21 and 23 is 30mA.
Power supply for Q21 and 23 is high tap(22V) of power trans-
former.

CLASS-A

As Q25 has high signal from microprocessor, Q25 and PH1 are turn-on.
Q27' s bias is decided by R123, 127, VR1 and 125. Bias cur-
rent of Q21 and 23 is increased by rising up Vce of Q27.
Heat loss is big in class-a. Power supply for Q21 and 23 is low
tap(10V) of that for protecting power transistors.

Rating wattage

Code	Wattage	Code	Wattage	Code	Wattage
1J	1/16W	2C	1/6W	3A	1W
2A	1/10W	2E	1/4W	3D	2W
2B	1/8W	2H	1/2W		

PC BOARD (Component side view)

TUNER UNIT (X05-4622-70)

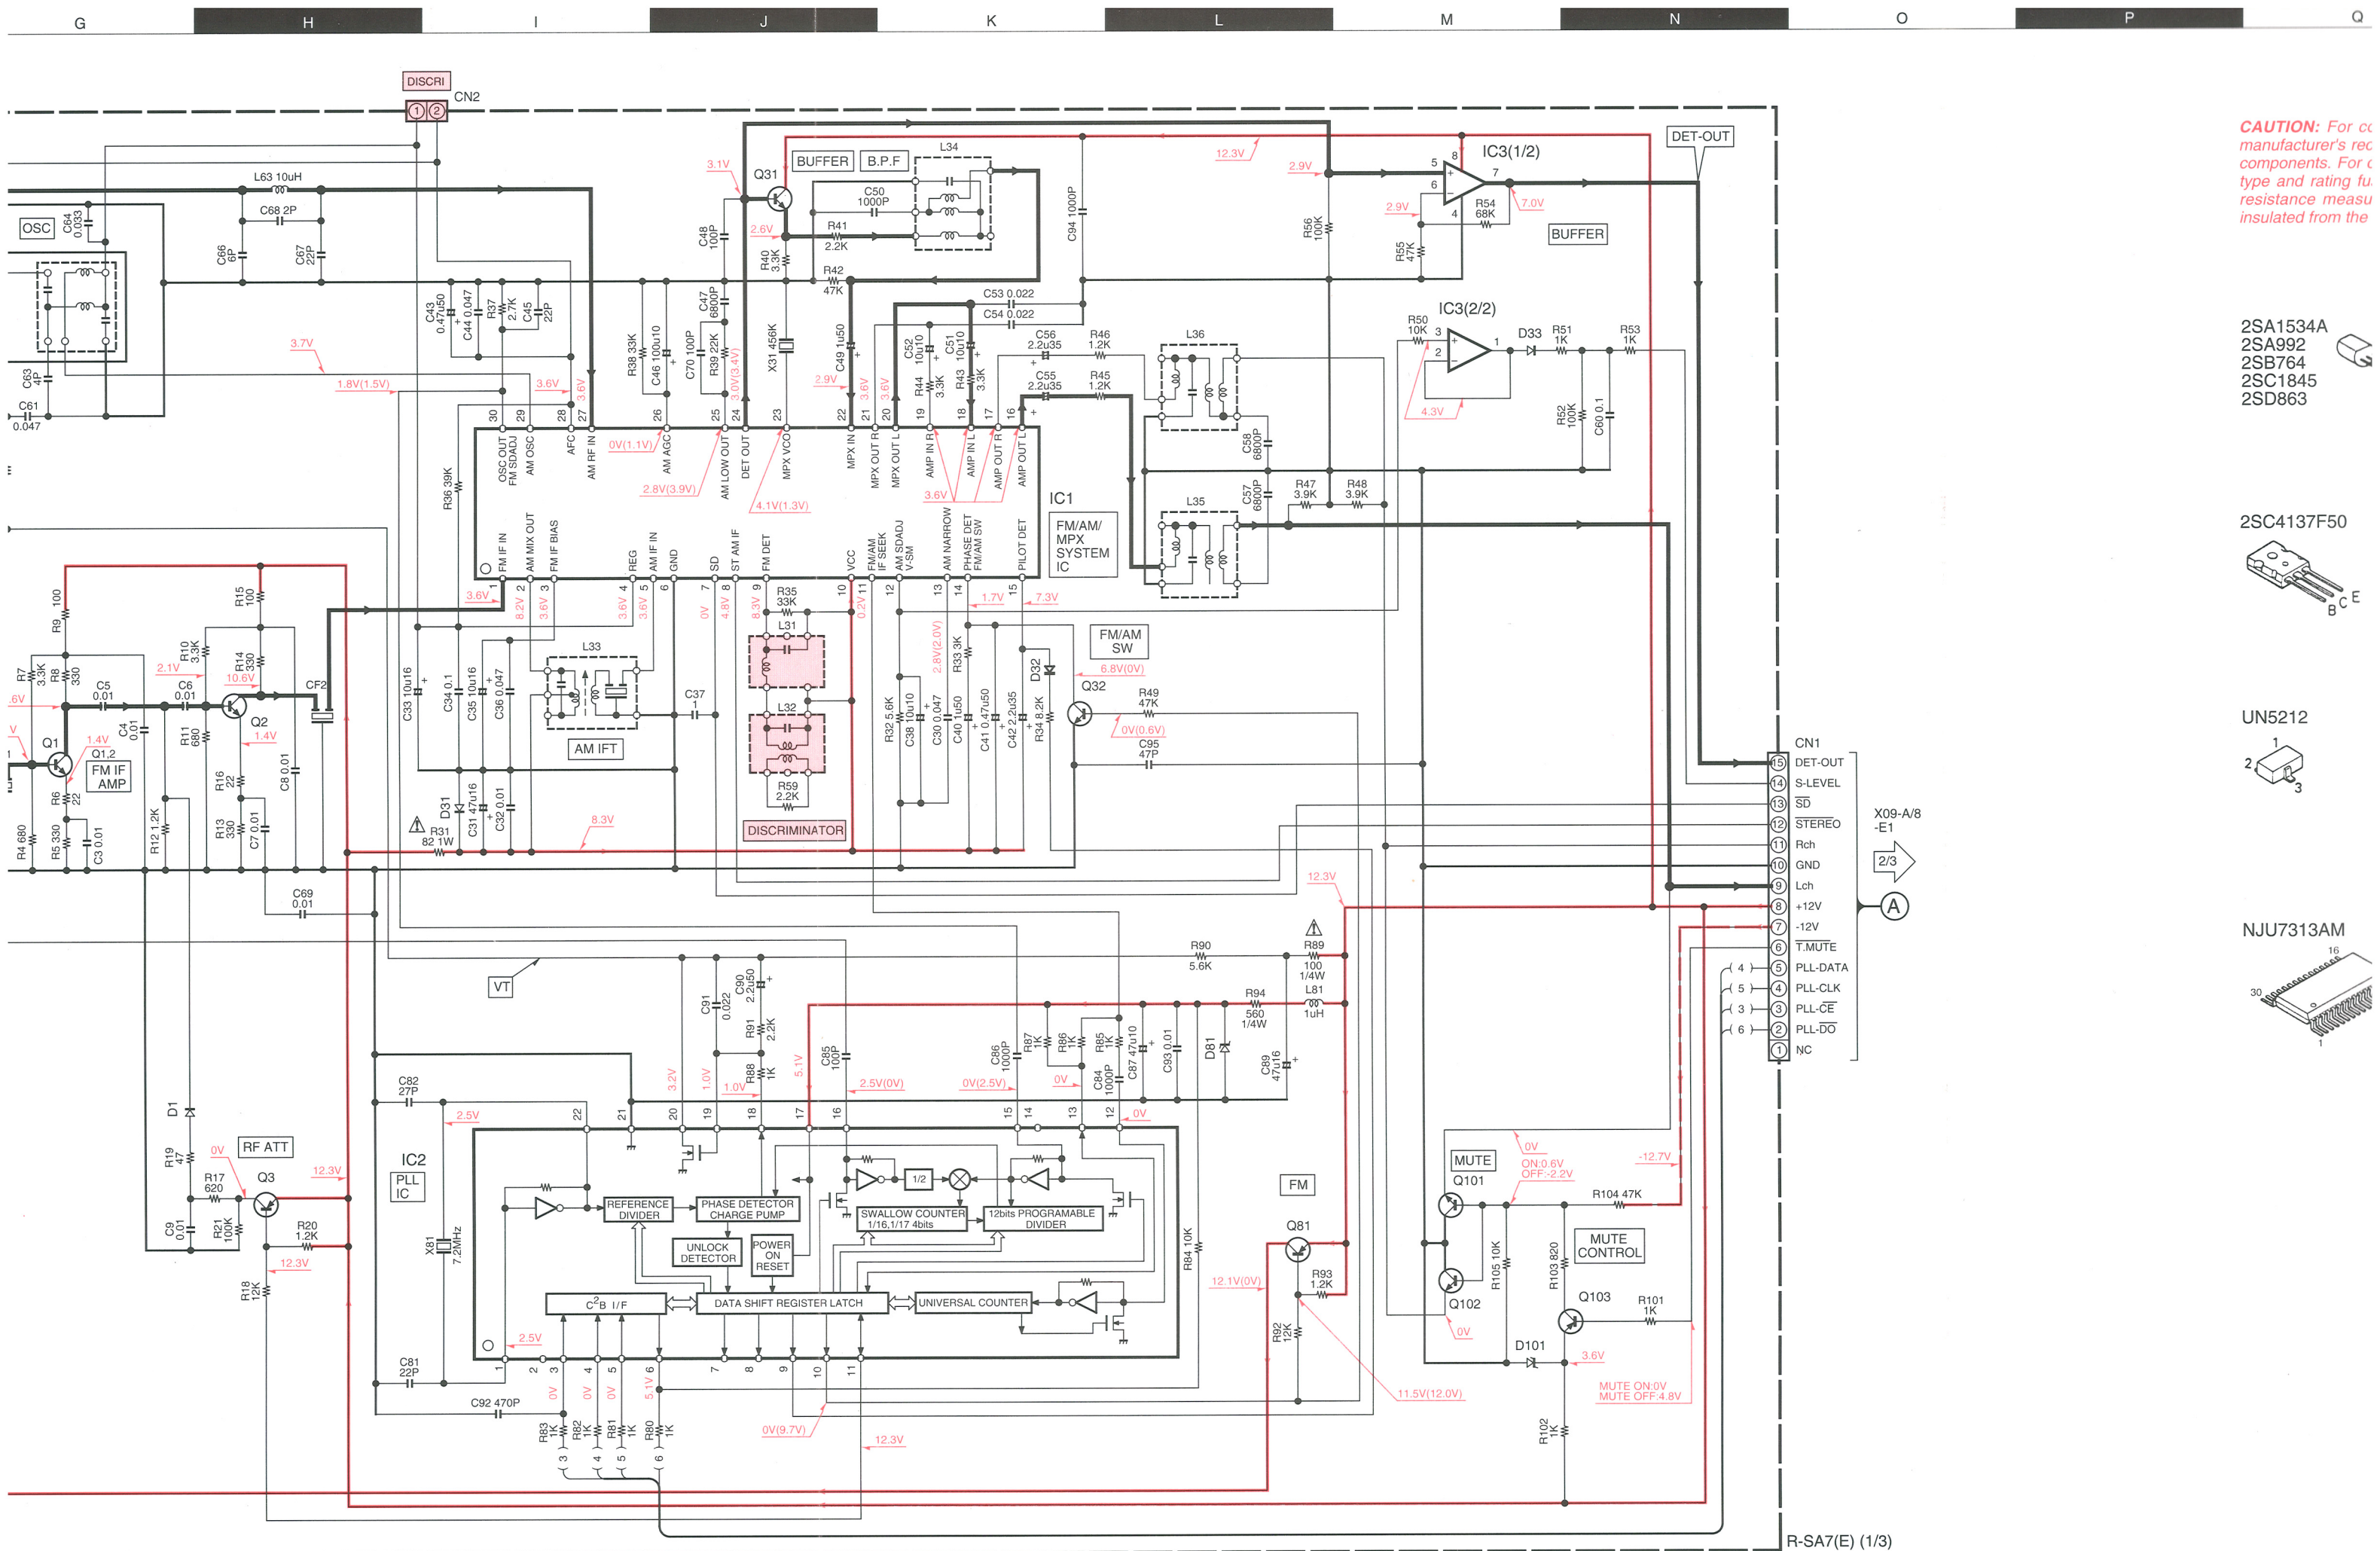

Refer to the schematic diagram for the value of resistors and capacitors.

Bclass
Idle current : 12mV(20mA)

CAUTION: For correct operation, use the manufacturer's recommended components. For correct operation, use the correct type and rating for all components. Resistance measurements should be taken with the power insulated from the circuit.

A diagram of a 5-pin D-sub connector, showing the pins numbered 1 through 5. Pin 1 is at the bottom, and pin 5 is at the top. The connector is shown from a perspective view, highlighting its D-shaped profile.

— SIGNAL LINE
— GND LINE
- - - +B LINE
- - - -B LINE

CAUTION: For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). Δ indicates safety critical components. For continued protection against risk of fire, replace only with same type and rating fuse(s). To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

The DC voltage is an actual reading measured with a high impedance type voltmeter with no signal input. The measurement value may vary depending on the measuring instruments used or on the product.

EXPLODED (UNIT)

PARTS LIST

Parts with the exploded numbers larger than 700 are not supplied.

SPECIFICATIONS

[Amplifier section]

Rated power output

Class AB operation

18 watts per channel minimum RMS, both channels driven, at 6Ω, 1kHz with no more than 10% total harmonic distortion.

(DIN) 1 kHz at 6 Ω, 0.7% T.H.D.12W+12W

Class A operation

5 watts per channel minimum RMS, both channels driven, at 6Ω, 1 kHz with no more than 10% total harmonic distortion.

Total harmonic distortion.....0.02%(1kHz, 10W, 6Ω)

Frequency response.....20Hz~100kHz, +0dB, -3dB

input sensitivity/impedance200mV/47KΩ

Output level/impedance

SUPER WOOFER PRE OUT.....2.0V/1kΩ

TAPE REC200mV/1kΩ

Signal to noise ration92dB (IHF'66)

[FM Tuner section]

Tuning frequency range87.5MHz~108MHz

Usable sensitivity (DIN)

MONO1.2μV (75Ω)/13.2dBf(40kHz DEV., S/N26dB)

Signal to noise ratio

(DIN weighted ar 1 kHz, 65.2 dBf input)

MONO.....65dB

STEREO60dB

Selectivity (DIN ±300kHz)64dB

Stereo separation (DIN at 1kHz).....40dB

[AM Tuner section]

Tuning frequency range531kHz~1,602kHz

Usable sensitivity (30%mod., S/N 20 dB)15μV(500μV/m)

Signal to noise ratio(at 30%mod., 1mV input)48 dB

Output level/impedance(30%mod., 1mV input).....0.18V/1kΩ

General

Power consumption45W

DimensionsW : 200mm

H : 75mm

D : 264mm

Weight (net).....3.3kg

1. KENWOOD follows a policy of continuous advancements in development. For this reason specifications may be changed without notice.
2. Sufficient performance may not be possible at very low temperatures(0°C or less).
